## Login with credentials

The aim of this test is to verify if the user can login using a valid email and the matching password.

Severity	Priority	Behavior	Туре
• Normal	<b>↑</b> High	Positive	Functional
Layer	Is Flaky	Milestone	Automation
E2E	No	-	Not automated

## **Status**

Actual

## **Pre-conditions**

The user has registered its email previously on the system.

## **Post-conditions**

The website loads with the user information

## **Parameters**

user\_email: jojeb28042@nubotel.com user\_password: QYeu6CD5R8&\* website\_url: https://carrefour.es

login register button text: Identifícate o Registrate

continue\_button\_text: Continuar

## **Scenario**

Given The website
When user clicks on
Then The login page appears
And user enters its email
And user clicks on the continue button
Then the password input appears
And user enters its password
And user clicks on the continue button
Then the website reloads with the user loged

## Login with incorrect password

The aim of this test is to verify if the user can't login using a valid email and an incorrect password.

Severity	Priority	Behavior	Туре
• Normal	<b>↑</b> High	Negative	Functional
Layer	Is Flaky	Milestone	Automation
E2E	No	-	Not automated

## **Status**

Actual

## **Pre-conditions**

The user has registered its email previously on the system.

## **Post-conditions**

A message appears advising the email or the password is not correct

## **Parameters**

user\_email: jojeb28042@nubotel.com

user\_password: QYeu6CD5 website\_url: https://carrefour.es

login register button text: Identifícate o Registrate

continue\_button\_text: Continuar

## **Scenario**

Given The website When user clicks on Then The login page appears And user enters its email And user clicks on the continue button

Then the password input appears
And user enters an incorrect password
And user clicks on the continue button

Then a message appears in red advising the email or the password is not correct

## Login with empty email

The aim of this test is to verify if the user can't login without specifing an email

Severity	Priority	Behavior	Туре
• Normal	<b>↑</b> High	Negative	Functional
Layer	Is Flaky	Milestone	Automation
E2E	No	<del>-</del>	Not automated

## **Status**

Actual

## **Pre-conditions**

The user has registered its email previously on the system.

## **Post-conditions**

A message appears advising the email or the password is not correct

## **Parameters**

website\_url: https://carrefour.es

login\_register\_button\_text: Identificate o Registrate

## Scenario

Given The website When user clicks on Then The login page appears

And user removes without typing anything the focus from the email input

Then an advise appears below the input indicating that this is a mandatory field

## Login with incorrect email format

The aim of this test is to verify if the user can't login using a malformed email.

Severity	Priority	Behavior	Туре
• Normal	<b>↑</b> High	Negative	Functional
Layer	Is Flaky	Milestone	Automation
E2E	No	<del>-</del>	Not automated

## **Status**

Actual

## **Pre-conditions**

The user has registered its email previously on the system.

## **Post-conditions**

A message appears advising the email or the password is not correct

## **Parameters**

user\_email: jojeb28042@nubotel website\_url: https://carrefour.es

login\_register\_button\_text: Identifícate o Regístrate

## **Scenario**

Given The website When user clicks on Then The login page appears And user enters its email And user removes the focus from the email input

Then an advise appears below the input indicating that the email format is incorrect

## Remember me checkbox

The aim of this test is to verify the functionality of the remember me checkbox

Severity	Priority	Behavior	Туре
• Normal	<b>↑</b> High	Positive	Functional
Layer	Is Flaky	Milestone	Automation
E2E	No	-	Not automated

## **Status**

Actual

## **Pre-conditions**

The aim of this test is to verify if the user can login using a valid email and the matching password.

## **Post-conditions**

The website loads with the user information

## **Parameters**

remember\_me\_button: Remember me

login\_button: Log in

login\_menu\_button: Log in

user email: bmontes1067@gmail.com

user password: Aa123456

website\_url: https://localhost:3000

## Scenario

Given The website
When the user clicks on
Then the login page appears
And user enters its email
And user enters its password
And user clicks on
And user clicks on

Then the website reloads with the user loged

And a the session is stored in a cookie on the browser

## **API - Login with credentials**

The aim of this test is to verify the api response using a valid email and the matching password.

Severity	Priority	Behavior	Туре
• Normal	<b>↑</b> High	Positive	Functional
Layer	Is Flaky	Milestone	Automation
API	No	-	Not automated

## **Status**

Actual

## **Pre-conditions**

The user has registered its email previously on the system.

#### **Post-conditions**

The website loads with the user information

## **Parameters**

user\_email: bmontes1067@gmail.com

user\_password: Aa123456

website\_url: https://localhost:3000

login\_menu\_button: Log in login button: Log in

## **Scenario**

Given The website

When user clicks on

Then The login page appears

And user enters its email

And user enters its password

And user clicks on the login button

Then the website reloads with the user loged

And login response code is 200

And login reponse body accessToken is not null

And login request body email is

And login request body password is

And api/users response code is 200

And api/users response body user email is

And api/users response body user password is not null

And api/users response body user id is 1

## **API - Login with incorrect password**

The aim of this test is to verify the api response using a valid email and an incorrect password.

Severity	Priority	Behavior	Туре
• Normal	<b>↑</b> High	Negative	Functional
Layer	Is Flaky	Milestone	Automation
API	No	-	Not automated

## **Status**

Actual

## **Pre-conditions**

The user has registered its email previously on the system.

## **Post-conditions**

A message appears advising the email or the password is not correct

## **Parameters**

user\_email: bmontes1067@gmail.com user\_incorrect\_password: Aa12345 website\_url: https://localhost:3000

login\_menu\_button: Log in

login\_button: Log in

response\_body: Incorrect password

## Scenario

Given The website
When user clicks on
Then The login page appears
And user enters its email
And user enters an incorrect password
And user clicks on the login button
Then login response code is 400
And login response body is

## **API - Login with empty email**

The aim of this test is to verify the api response if when trying to login without specifing an email

Severity	Priority	Behavior	Туре
• Normal	<b>↑</b> High	Negative	Functional
Layer	Is Flaky	Milestone	Automation
API	No	-	Not automated

## **Status**

Actual

## **Pre-conditions**

The user has registered its email previously on the system.

## **Post-conditions**

A message appears advising the email or the password is not correct

## **Parameters**

website\_url: https://localhost:3000

login\_menu\_button: Log in

login\_button: Log in

response\_body: Email and password are required

## **Scenario**

Given The website When user clicks on Then The login page appears And user clicks on the login button Then login response code is 400 And login response body is

# **API - Login with incorrect email format**

The aim of this test is to verify the api response if the user tries to login using a malformed email.

Severity	Priority	Behavior	Туре
• Normal	<b>↑</b> High	Negative	Functional
Layer	Is Flaky	Milestone	Automation
API	No	-	Not automated

## **Status**

Actual

## **Pre-conditions**

The user has registered its email previously on the system.

## **Post-conditions**

A message appears advising the email or the password is not correct

## **Parameters**

user\_bad\_formed\_email: bmontes1067@gmail

user\_password: Aa123456

website\_url: https://localhost:3000

login\_menu\_button: Log in

login button: Log in

response\_body: Cannot find user

## Scenario

Given The website
When user clicks on
Then The login page appears
And user enters a bad formed email
And user enters its password
And user clicks on the login button
Then login response code is 200
And login reponse body is
