Login with credentials

The aim of this test is to verify if the user can login using a valid email and the matching password.

Severity	Priority	Behavior	Type
○ Normal	↑ High	Positive	Functional

Layer	Is Flaky	Milestone	Automation
E2E	No	-	Not automated

Status

Actual

Pre-conditions

The user has registered its email previously on the system.

Post-conditions

The website loads with the user information

Parameters

user_email: jojeb28042@nubotel.com
user_password: QYeu6CD5R8&*
website_url: https://carrefour.es
login_register_button_text: Identifícate o Regístrate
continue_button_text: Continuar

Scenario

Given The website website_url
When user clicks on login_register_button_text
Then The login page appears
And user enters its email user_email
And user clicks on the continue button continue_button_text
Then the password input appears
And user enters its password user_password
And user clicks on the continue button continue_button_text
Then the website website_url reloads with the user loged

Login with incorrect password

The aim of this test is to verify if the user can't login using a valid email and an incorrect password.

Severity	Priority	Behavior	Type
○ Normal	↑ High	Negative	Functional

Layer	Is Flaky	Milestone	Automation
E2E	No	-	Not automated

Status

Actual

Pre-conditions

The user has registered its email previously on the system.

Post-conditions

A message appears advising the email or the password is not correct

Parameters

user_email: jojeb28042@nubotel.com
user_password: QYeu6CD5
website_url: https://carrefour.es
login_register_button_text: Identifícate o Regístrate
continue_button_text: Continuar

Scenario

Given The website website_url
When user clicks on login_register_button_text
Then The login page appears
And user enters its email user_email
And user clicks on the continue button continue_button_text
Then the password input appears
And user enters an incorrect password user_password
And user clicks on the continue button continue_button_text
Then a message appears in red advising the email or the password is not correct

Login with empty email

The aim of this test is to verify if the user can't login without specifing an email

Severity	Priority	Behavior	Type
○ Normal	↑ High	Negative	Functional

Layer	Is Flaky	Milestone	Automation
E2E	No	-	Not automated

Status

Actual

Pre-conditions

The user has registered its email previously on the system.

Post-conditions

A message appears advising the email or the password is not correct

Parameters

website_url: https://carrefour.es
login_register_button_text: Identifícate o Regístrate

Scenario

Given The website website_url
When user clicks on login_register_button_text
Then The login page appears
And user removes without typing anything the focus from the email input
Then an advise appears below the input indicating that this is a mandatory field

Login with incorrect email format

The aim of this test is to verify if the user can't login using a malformed email.

Severity	Priority	Behavior	Type
o Normal	↑ High	Negative	Functional

Layer	Is Flaky	Milestone	Automation
E2E	No	-	Not automated

Status

Actual

Pre-conditions

The user has registered its email previously on the system.

Post-conditions

A message appears advising the email or the password is not correct

Parameters

user_email: jojeb28042@nubotel
website_url: https://carrefour.es
login_register_button_text: Identifícate o Regístrate

Scenario

Given The website website_url
When user clicks on login_register_button_text
Then The login page appears
And user enters its email user_email
And user removes the focus from the email input
Then an advise appears below the input indicating that the email format is incorrect

Remember me checkbox

The aim of this test is to verify the functionality of the remember me checkbox

Severity	Priority	Behavior	Type
o Normal	↑ High	Positive	Functional
Layer	**Is Flaky**	**Milestone**	**Automation**
E2E	No	-	Not automated
Status			
Actual			

Pre-conditions

The aim of this test is to verify if the user can login using a valid email and the matching password.

Post-conditions

The website loads with the user information

Parameters

remember_me_button: Remember me
login_button: Log in
login_menu_button: Log in
user_email: bmontes1067@gmail.com
user_password: Aa123456
website_url: https://localhost:3000

Scenario

Given The website website_url
When the user clicks on login_menu_button
Then the login page appears
And user enters its email user_email
And user enters its password user_password
And user clicks on remember_me_button
And user clicks on login_button
Then the website website_url reloads with the user loged
And a the session is stored in a cookie on the browser

API - Login with credentials

The aim of this test is to verify the api response using a valid email and the matching password.

Severity	Priority	Behavior	Type
○ Normal	↑ High	Positive	Functional

Layer	Is Flaky	Milestone	Automation
API	No	-	Not automated

Status

Actual

Pre-conditions

The user has registered its email previously on the system.

Post-conditions

The website loads with the user information

Parameters

user_email: bmontes1067@gmail.com
user_password: Aa123456
website_url: https://localhost:3000
login_menu_button: Log in
login_button: Log in

Scenario

Given The website website_url
When user clicks on login_menu_button
Then The login page appears
And user enters its email user_email
And user enters its password user_password
And user clicks on the login button login_button
Then the website website_url reloads with the user loged
And login response code is 200
And login reponse body accessToken is not null
And login request body email is user_email
And login request body password is user_password
And api/users response code is 200
And api/users response body user email is user_email
And api/users response body user password is not null
And api/users response body user id is 1

API - Login with incorrect password

The aim of this test is to verify the api response using a valid email and an incorrect password.

Severity	Priority	Behavior	Type
o Normal	↑ High	Negative	Functional

Layer	Is Flaky	Milestone	Automation
API	No	-	Not automated

Status

Actual

Pre-conditions

The user has registered its email previously on the system.

Post-conditions

A message appears advising the email or the password is not correct

Parameters

user_email: bmontes1067@gmail.com
user_incorrect_password: Aa12345
website_url: https://localhost:3000
login_menu_button: Log in
login_button: Log in
response_body: Incorrect password

Scenario

Given The website website_url
When user clicks on login_menu_button
Then The login page appears
And user enters its email user_email
And user enters an incorrect password user_incorrect_password
And user clicks on the login button login_button
Then login response code is 400
And login response body is response_body

API - Login with empty email

The aim of this test is to verify the api response if when trying to login without specifing an email

Severity	Priority	Behavior	Type
o Normal	↑ High	Negative	Functional

Layer	Is Flaky	Milestone	Automation
API	No	-	Not automated

Status

Actual

Pre-conditions

The user has registered its email previously on the system.

Post-conditions

A message appears advising the email or the password is not correct

Parameters

website_url: https://localhost:3000
login_menu_button: Log in
login_button: Log in
response_body: Email and password are required

Scenario

Given The website website_url
When user clicks on login_menu_button
Then The login page appears
And user clicks on the login button login_button
Then login response code is 400
And login response body is response_body

API - Login with incorrect email format

The aim of this test is to verify the api response if the user tries to login using a malformed email.

Severity	Priority	Behavior	Type
o Normal	↑ High	Negative	Functional

Layer	Is Flaky	Milestone	Automation
API	No	-	Not automated

Status

Actual

Pre-conditions

The user has registered its email previously on the system.

Post-conditions

A message appears advising the email or the password is not correct

Parameters

user_bad_formed_email: bmontes1067@gmail
user_password: Aa123456
website_url: https://localhost:3000
login_menu_button: Log in
login_button: Log in
response_body: Cannot find user

Scenario

Given The website website_url
When user clicks on login_menu_button
Then The login page appears
And user enters a bad formed email user_bad_formed_email
And user enters its password user_password
And user clicks on the login button login_button
Then login response code is 200
And login reponse body is response_body
